**Track the weather in your fields, not the nearest airport.**

**Weather Station**

Receive stress alerts, wind advisories, and monitor rainfall. Know the exact spraying conditions before heading to the field.

- Know the exact spraying conditions before heading to the field
- Receive crop stress alerts based on in-field conditions
- Know about sudden weather changes instantly
- Keep a backup record of all local weather conditions for environmental and other reporting requirements

**It rained in your area last night. How much did your field get?**

**Rainfall Measurement**

Monitor rainfall and soil moisture together to know the amount and benefits of last night's rain.

- Bridge tells you "when", "how much", and "how fast" the rainfall came, not just the amount since the last time you remembered to dump the gauge
- How much did it rain last night? How much did it rain per hour? Did it rain so hard, it ran off into the ditch and didn't infiltrate? Did you lose nitrogen with that hard rain? ServiTech Bridge helps you answer those questions

**Water is the fuel that powers your crop. As irrigation costs continue to rise, you should have a fuel gauge.**

**Soil Moisture Management**

Sensor driven irrigation management has shown potential ROI of up to \$50 per acre in row crops according to University of Nebraska research—with even more significant ROI potential in high value crops such as vegetables.

- ServiTech soil moisture management is the gauge for your irrigation and soil moisture decisions, based on real time field data.
- Customizable crop stress alerts to your phone, tablet, or computer
- Includes field imagery and soil texture analysis for accurate water holding capacity of your field

**Know exactly where to look when you go to the field.**

**Field Imagery**

What does the crop look like in the far corner of the field? Know exactly where the trouble spots are while there's still time to fix them.

- Know week-to-week crop vigor changes
- Identify recurring problem areas from year-to-year with historical imagery
- Predict yield variations in-season
- Identify dry and immature areas of the field to aid in harvest

**About ServiTech**

ServiTech is the largest crop consulting company, agricultural laboratory analysis and field intelligence company in the nation.

- 45-year history of service excellence in the field
- 80 certified crop consultants
- Full service laboratories distributed regionally across the Great Plains (Texas to Nebraska)
- The best combination of field experience and the latest advancements in ag technology

ServiTech provides unbiased analytical decision support services through a network of expert talent aimed at enhancing profitability and productivity

## ServiTech Bridge

Simple. Reliable. Accurate. Data Driven.

The agronomic solution you've been looking for.

ServiTech Bridge™ Field Intelligence is a subscription service using in-field sensors and analytics that gives you vital information about your field conditions.

All installation, maintenance, and extraction are performed by a professional installer. There's no equipment to own or install.

**Order Today!**

Powered by ServiTech Bridge™ Field Intelligence

**Soil Moisture Management**

Every tank needs a gauge. Applying too little or too much water hurts profit. ServiTech Bridge is your soil water gauge.

**Pivot Status**

Still checking pivots in person every day? A stuck or misaligned pivot hurts profit. Know instantly where your pivots are. Combine with pressure and flow sensors, tank monitoring, and well status to have a comprehensive irrigation monitoring system.

**Rainfall Measurement**

It rained in your area last night. How much did your field get? How fast did it come? Did your fields benefit? Monitor rainfall and soil moisture together to know the amount and benefits of last night's rain.

**Weather Station**

No model beats a dedicated weather station in the field. Receive stress alerts, wind advisories, and monitor rainfall. Know the exact spraying conditions before heading to the field.

**Well Status**

Monitor and record uptime of your irrigation well. Combine with pressure and flow sensors, tank monitoring, and pivot status to have a comprehensive irrigation monitoring system.

**Fan Status**

Move from irrigation well to grain bin fan to track and monitor the its operation. Both Well & Fan Status sensors are user installed devices.

**Tank Monitoring**

Monitor all of your tanks remotely and receive notifications when levels reach set points. Never run out of propane, diesel, fertilizer, or feed. Keep the house warm, the cattle fed, the pivot running, and your peace of mind. Coming fall 2019.

**Lagoon Monitoring**

Check pens, not ponds. Stay in compliance with state and federal regulatory agencies. Combine with weather station and grid sampling for complete environmental monitoring. Coming fall 2019.

**Flow Meter**

Monitor and record flow volume and changes automatically. Combine with pressure sensors, well status, tank monitoring, and pivot status to have a comprehensive irrigation monitoring system. Coming summer 2020.

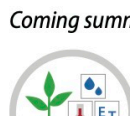

**Pressure Sensor**

Irrigation pressure varies from pivot to pivot, from the pivot point to the last tower, and from one side of the field to the other. Know the pressure changes as they happen and receive customized alerts. Coming summer 2020.

**Field Imagery**

What does the other side of the field look like? Where do I need to scout? Know exactly where to look when you go to the field.

**Growth Modeling**

Every in-field sensor subscription comes with field imagery, soil texture analysis, and growth modeling so your soil's water holding capacity, variation, and crop's water needs are predicted accurately.
